

Yakama Nation
Salmon Habitat Enhancement
Request for Proposal
Due 11:00 AM October 15th, 2018

The **YAKAMA NATION (YN)** is soliciting a Request for Qualifications to develop drawings and specifications to restore natural drainage patterns that are currently disrupted due to the presence of a railroad embankment, located in south central Washington State. The intent is to develop a set of engineering designs for common scenarios observed along the Swale Canyon section of the Klickitat Trail managed by Washington State Parks. Once implemented, designs would improve tributary and spring connectivity to mainstem Swale Creek, a tributary of the Klickitat River entering at river mile 17.2 north of Klickitat, WA. The YN seeks qualified firms to develop designs that reduce interruption of flow, sediment, and wood by the trail embankment and tributary crossing structures, development of preliminary evaluations and conceptual designs for bridge/trestle replacements as well as the identification and conceptual design of one additional salmonid enhancement project. All work on the project must be completed prior to March 31, 2018, and proposals must indicate availability accordingly. Qualification packages will be distributed upon request. Proposals must be received by email by Klickitat Watershed Enhancement Project Hydrologist, Adrienne Grimm, agrimm@ykfp.org by October 15, 2018 at 11:00 AM.

Please direct questions to Adrienne Grimm (agrimm@ykfp.org, 509-281-1935) or Project Manager, David Lindley (dlindley@ykfp.org, 509-830-0034). Email is the preferred format for questions.
